

# Analysis

1) When our model predicts Golden, Labrador, Pembroke and all the breeds colored in orange -as a first prediction- it's more likely or surely a true prediction, but we can't say the opposite as we don't know the actual breed of the false predictions, we only know if the prediction is true or false.

2) Unfortunately there is no strong relation between the prediction confidence and being true or false.

3) Some popular dog names are:

Oliver, Cooper, Charlie, Tucker, Lucy, Winston, Sadie, Penny, Toby, Daisy, Lola, Koda, Jax, Bo, Bella.

4) Golden Retriever dogs is the most common breed in dog adoption, and that's because Goldens are known to be friendly, funny, smart and eager to please.

5) As Expected there is a strong relation between number of favorites, and number of retweets. Also number of favorites is being greater than number of retweets most of the time.
